

Altrovia AI UI/UX Redesign

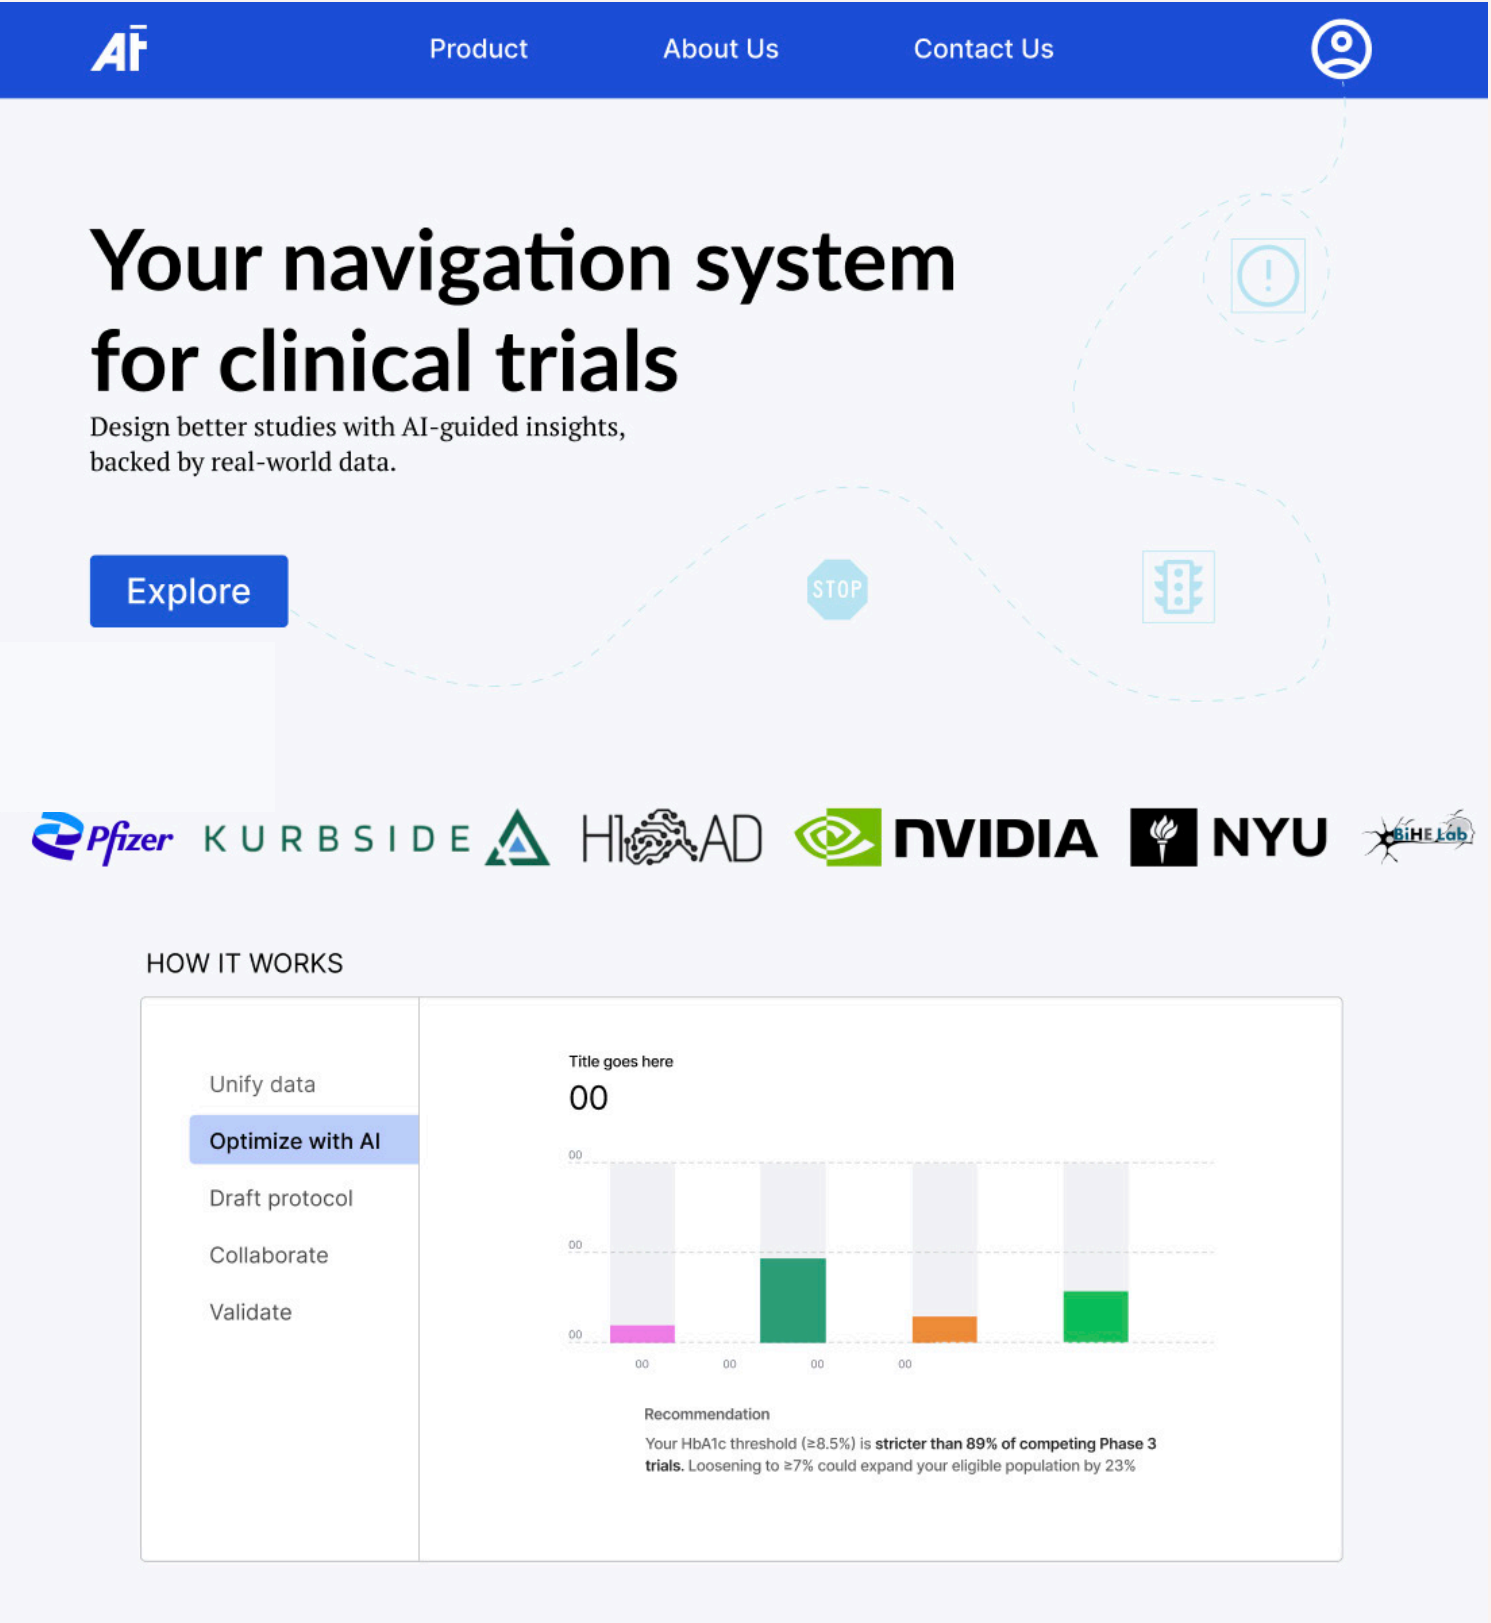

By Karen Zheng, Olivia Jung, Jane Zhou

Problem

In the original Altrovia website, it was unclear what the product actually does. The wording was vague, and there weren't complete pictures/videos of using the product to design sample clinical trials.

This lack of clarity causes an accessibility problem. It was hard to visualize how Altrovia AI could specifically aid researchers.

Solution

We decided to rephrase the website descriptions, making its functionality more clear and concise.

We also incorporated a concrete visual of the interface, so viewers can see what using Altrovia AI to design a clinical trial looks like, rather than read about it.

Design Rationale

For the website, we used blue to enhance viewers' feelings of reliability. We also incorporate more interactivity, so viewers can experiment with how Altrovia AI works.

For Altrovia's features, we designed a UI mockup similar to an LLM. Clicking each block on the left expands one way to incorporate Altrovia in the workflow.

HOW IT WORKS

Unify data

Optimize with AI

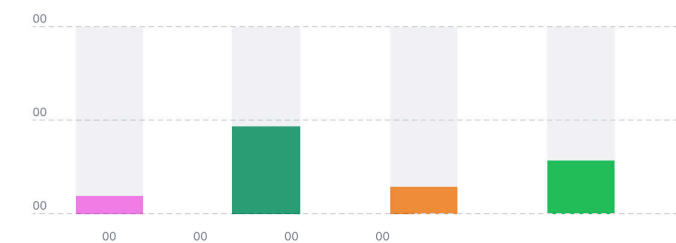

Draft protocol

Collaborate

Validate

Title goes here

00

Recommendation

Your HbA1c threshold ($\geq 8.5\%$) is **stricter than 89% of competing Phase 3 trials**. Loosening to $\geq 7\%$ could expand your eligible population by 23%

Central Knowledge Hub

Keep everything searchable, reusable, and everything stays with your organization.

Amendment History

For the upcoming feature, the Central Knowledge Hub, we visualized each component using a folder design. This emphasizes how the new feature keeps data organized.

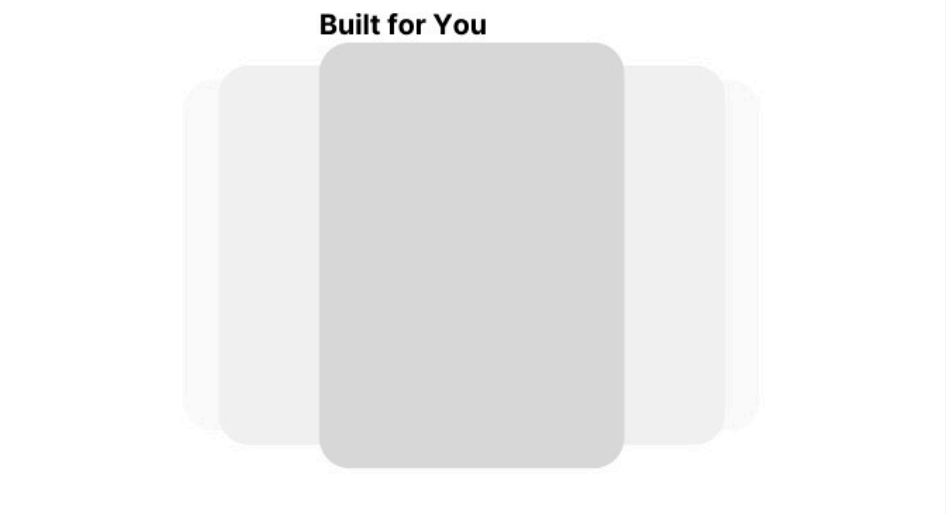

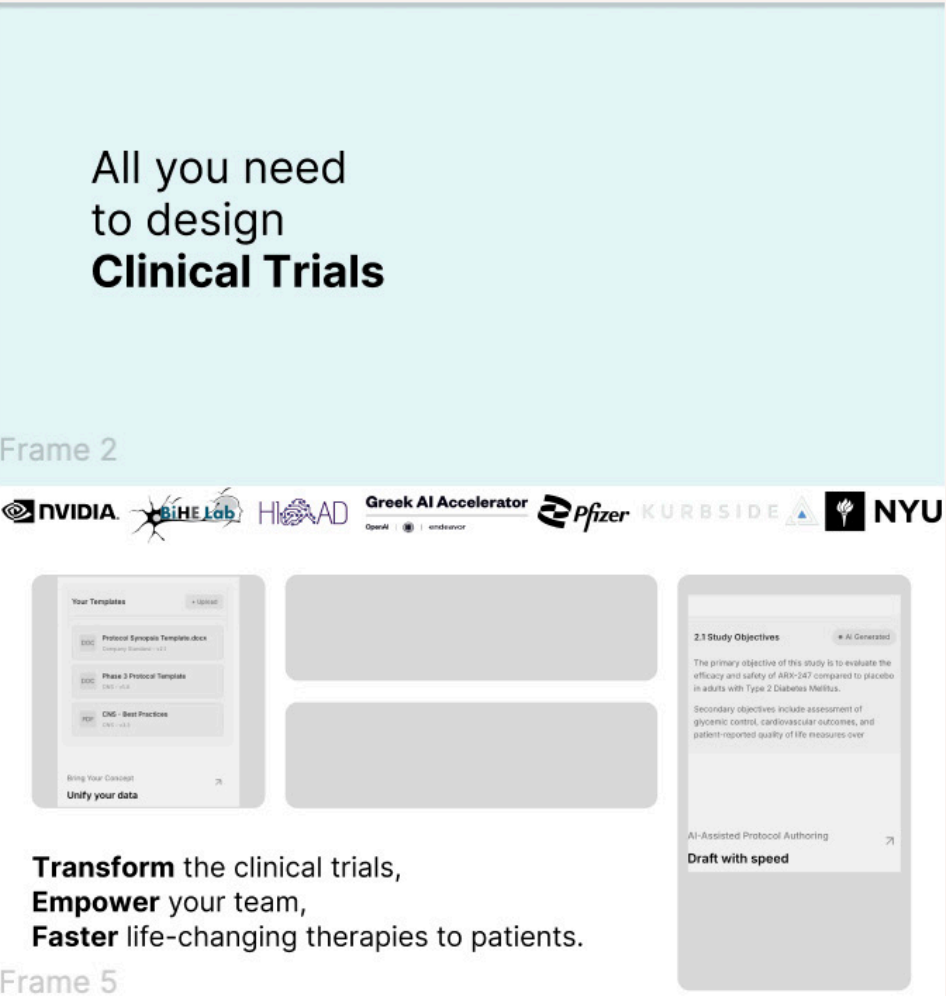

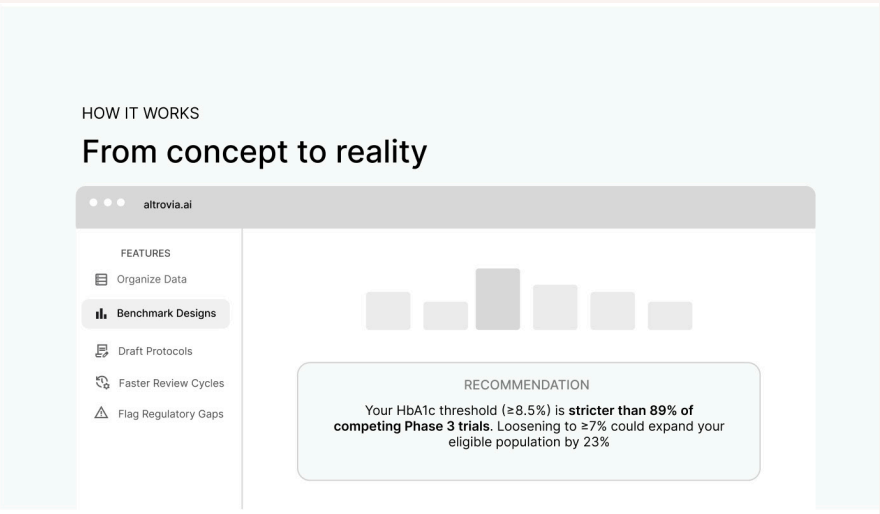

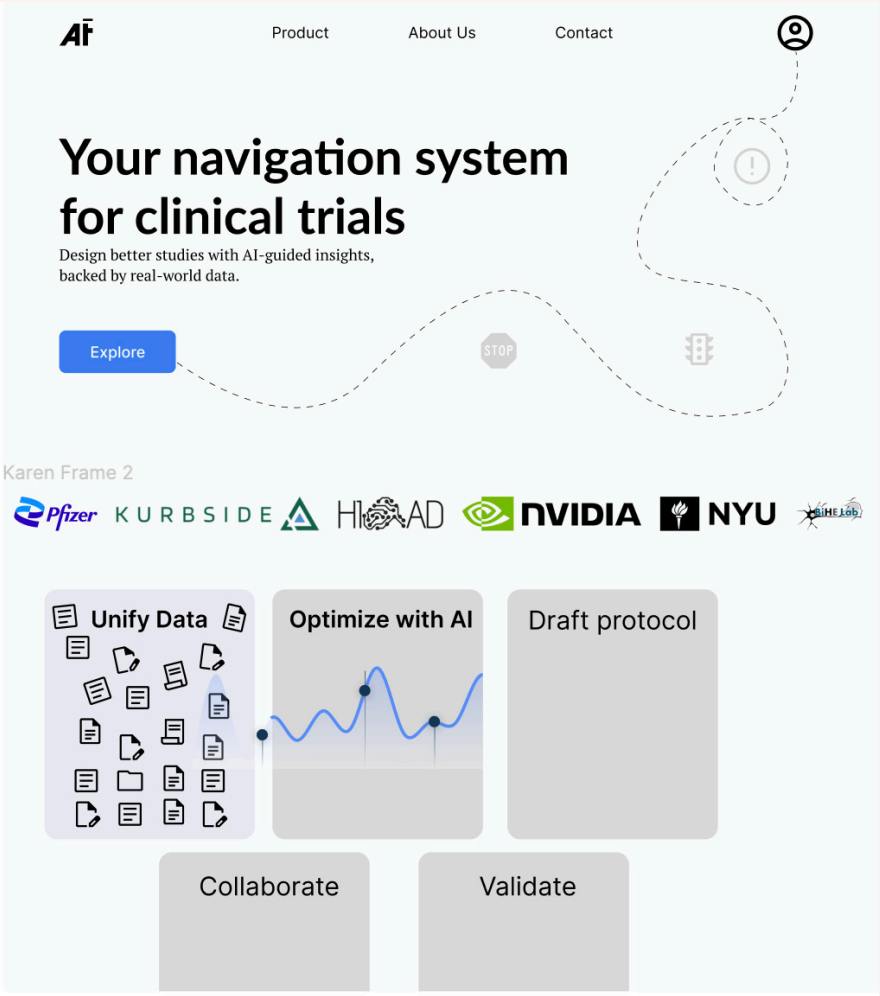

Design Process

First, we started by created wire frame ideas, referencing the original Altrovia website and adjacent industry websites, such as Cursor.

Design Process

Continuing to build upon our wireframe idea, we started drafting our designs in Figma. We agreed on a clean, minimalistic style, aligning with the brand's futuristic, professional personality.

Final Result

Finally, we combined what we liked about each design together. We polished the designs, and reached our final product. Here is the link to a prototype.
